
Thank you for Purchasing a Krivo pickup for Resophonic Guitar

To install your new pickup simply follow these steps

1. Remove the protective film:
from the pickup. →

2. Take two small lentil sized
pieces of the
included putty, and apply to
each side of the pickup as
shown. →

Flatten the putty as much as you can to avoid adding any unnecessary height to the pickup. It only takes a tiny amount of putty to securely adhere the pickup to the guitar.

3. Place your pickup on the guitar such that the magnetic pole-pieces are aligned under each string →

4. Gently, but firmly, press the pickup down using a slight rocking motion until it is securely affixed to the guitar.

5. To adjust the volume of a particular string, use the included hex wrench, The closer a pole is to a string the more volume is produced, the farther away the quieter that string will be). Depending on your particular guitar and type of strings used it may be necessary to remove the “b” and or high “e” poles completely in order to achieve perfect balance.

6. Finally, simply plug the attached 1/4" cable into your amplifier and you are ready to play.

(A video explaining the installation if this pickup is also available here: <https://www.youtube.com/watch?v=xIT6LA10jcA>)
